Legend:

This Chart shows acres of parks per thousand residents for the County of Los Angeles as a whole, and in each State Assembly District, first with large parks and the Angeles National Forest included, and then without the large parks and Forest. The Chart breaks down this information as follows.

Column C shows the total population in the County and in each Assembly District. Column D shows the total acres of land. Column E shows the total acres of parks in the County and in each District, including large parks and the Angeles National Forest. Column F shows the total acres of parks per thousand residents in the County and in each District, including large parks and the National Forest.

In Columns G and H, the acres of large parks and forest space that actually lie within each District are subtracted. For example, the Angeles National Forest covers close to 700,000 acres, but only the 669,033 acres that actually lie within the County and each District are excluded.

The acreage for the Angeles National Forest and each large park that is subtracted in Column G is as follows:
 Angeles National Forest 669,033 acres
 Santa Monica Mountains National Recreation Area 49,426 acres
 Griffith Park 3,542 acres
 Elysian Park 686 acres
 Baldwin Hills 462 acres

Based on these calculations, 25% of all land in Los Angeles County is in the Angeles National Forest. Fully 78% of all park space in the County is in the Angeles Forest. 6% of all park space in the County lies within the Santa Monica Mountains National Recreation Area.

Total Population, Total Acres of Land, and Acres of Park will vary slightly between County Supervisorial, State Assembly, and State Senate spreadsheets due to minor geographical differences in the data sets.

Total Acres of Parks per Thousand Residents 217A
